

RGT Hybra

RGT Hybra, is the first true F1 hybrid forage brassica cultivar from RAGT. Setting a new benchmark for superior forage yields.

SUPERIOR FORAGE YIELDS

Introducing RGT Hybra - the first true F1 Hybrid Forage brassica. RAGT in conjunction with breeding house R2n were able to produce a novel F1 hybrid forage brassica which has been dominating yield trials Australia wide.

Initially tested in NSW in 2019/20 and further in 2022/23 in Victoria and Tasmania, RGT Hybra continues to produce excellent yields across variable soil types, environments and seasons. Forage quality tests have also confirmed its exceptional quality, and are available on request.

SOWING RATE

Dryland	2-4 kg/ha
Irrigation/Rainfall	3-5 kg/ha

Suitable for sheep,
beef and dairy cattle

FEATURES

High yielding	High energy
Excellent post grazing recovery	High Protein
8-10 week maturity	Low NDF

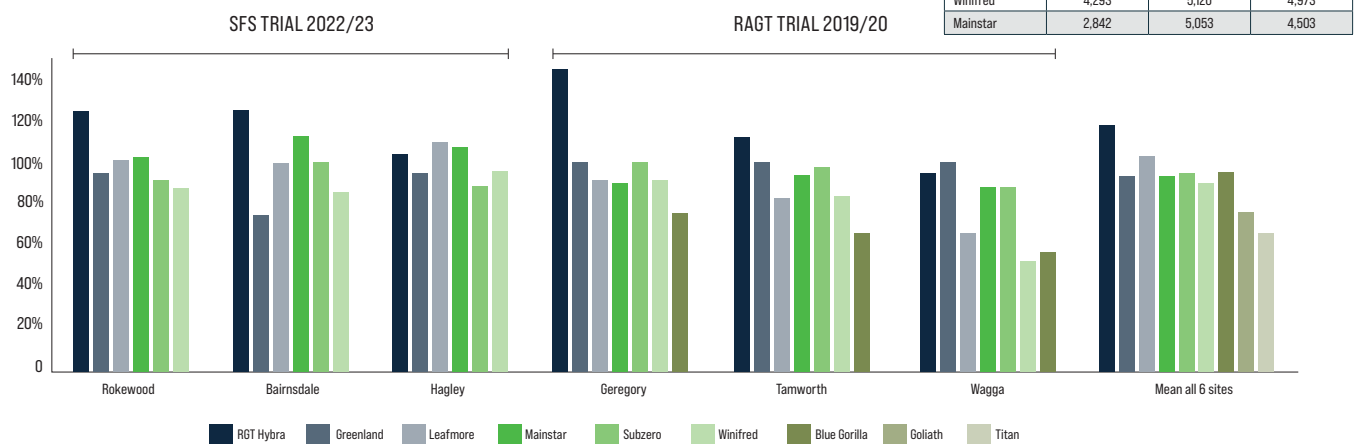

BENEFITS

- More feed allowing for increased stocking rates
- More quality feed over summer means increased production
- Increased probability for multiple grazings
- Suitable for all classes of livestock

Mid-Late
Maturity

Australian
Release >2025

*Data from 2022/23 VIC TAS SFS Trials and 2019/20 RAGT NSW Trials. RGT Hybra has been a consistent top performer across multiple regions and conditions.
